

Notify Technology Announces Support for ConnectWise Manage

MSPs and IT Service Providers will be able to integrate Notify's MobileRMM solution with their ConnectWise Manage platform

Boardman, Ohio – February 10, 2020 – Notify Technology Corporation, a leading mobility solutions provider, today announced that its latest release of Notify MobileRMM platform will integrate with the ConnectWise Manage platform. Notify's MobileRMM solution is powered by a robust device management platform supporting iOS and Android smart phones and tablets. Designed as a on-premise or cloud multi-tenant platform for MSPs or IT Service Providers, MobileRMM also features monthly billing, aggressive licensing options and now an integration to ConnectWise Manage.

“After talking to a number of ConnectWise MSPs and IT service providers about their needs for implementing a MobileRMM solution, we heard a very loud and clear message that integration into their Professional Services Automation (PSA) platform would be a critical success factor,” said Paul DePond, President and founder of Notify Technology. It turned out that the initial majority of MSP’s we presented to were in fact ConnectWise Manage users. With their input, we made the decision to develop and launch our first integration with ConnectWise Manage as it is recognized as one of the leaders in the MSP and IT service provider marketplace”

Integration Features:

- Allows each organization enrolled into the ConnectWise Manage platform an opportunity to now include information about the mobile devices that are under management utilizing the integration of the Notify MobileRMM service.
- Provides an automated daily update to ConnectWise Manage billing as mobile devices are added, changed or removed from the MobileRMM service. This will provide a more efficient and accurate billing to any MSP customer utilizing the MobileRMM service.

- Daily updates of mobile device information will provide your help desk staff with valuable information when a trouble ticket is needed to be issued. By having up to date configuration information on the customer's mobile devices, the help desk team will be more productive resolving customer issues.
- Ability for ConnectWise Manage to provide reporting of customers managed mobile devices in addition to their PC's and servers. Reports detailing mobile device types, OS version and other configuration elements will be essential information for IT and company management.
